The AI Platform for Accounting Firms & Enterprise Finance Departments

Vic.ai layers on top of your existing systems, learning how your team works and helping them out. No need to rip and replace your existing accounting, expense, tax or reporting software. Want your team to be more efficient? Reduce errors? Improve your firm's margins?
- Vic.ai is a platform that works for you.

A Self-Driven Future for Accounting

Vic.ai makes you more productive and less stressed, providing you with time for more important tasks.

The Next Big Shift

Vic.ai represents the next big shift in Accounting and Auditing. The previous one, "cloud systems," happened 10-15 years ago. This important shift to a cloud-based architecture laid the grounds for the AI revolution we're now about to experience.

Autonomous Future

With deep learning and feature engineering trained on hundreds of millions of financial transactions, we're now on the brink of a fully autonomous AP department, and rapidly progressing in augmenting the entire finance department.

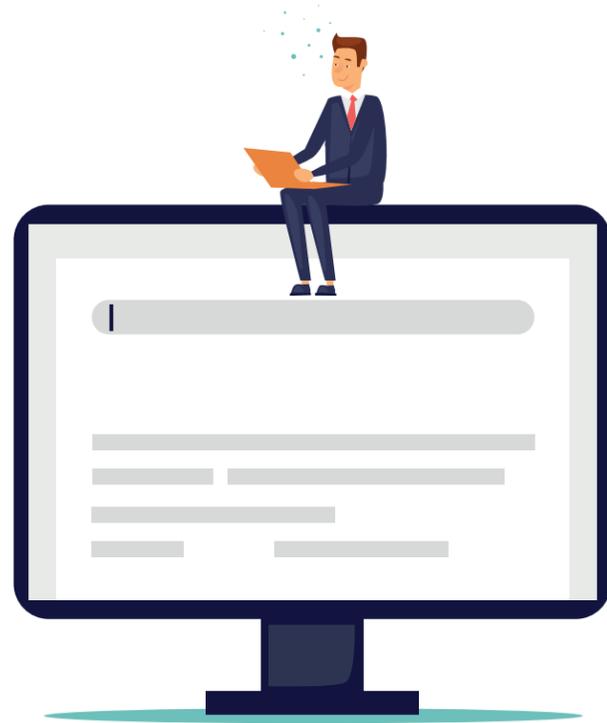

Built for Accounting Firms

Since the 80s, accounting firms have used computers and software to become more efficient. Vic.ai is the next generation of efficiency and accuracy for Accounting firms, leveraging AI trained on hundreds of millions of documents and transactions for unparalleled performance. No more human data entry, approvals or ledger postings.

... And Finance Departments

We make your finance department more effective from day one. With greater speed, higher accuracy, better fraud prevention, three-way-control and lower costs, Vic.ai allows you to continue growing your business without increasing your staff.

It's the platform for Accounting productivity.

Vic.ai is the next generation of efficiency and accuracy for Accounting firms, leveraging AI trained on hundreds of millions of documents and transactions for unparalleled performance. No more manual data entry, approvals or ledger postings.

Works for you.

Vic.ai performs the tasks you do repeatedly, making you more productive and less stressed, providing you with time for more important tasks. Vic.ai integrates with the main accounting systems, and supports custom API integration with nearly any type of system.

Learns from you.

Vic.ai learns from your input on the fly, rapidly improving its performance. The learning is automatically distributed throughout your organization and your clients.

Improves your turnaround.

Vic.ai works 24/7, 365 days per year and never tires. It's your secret weapon for excelling with your clients, helping you overdeliver on tasks you couldn't even get to today.

Augment your financial department with our AI platform.

No need to rip and replace; our platform layers on top of your existing software stack. As with the impetus of self-driving cars, AI might seem a bit scary right now, but the progress being made is real and the impact will be significant. Lagging behind can be costly, and getting started only takes a couple of days. Your organization can significantly increase speed and accuracy while reducing costs in as little as a month.

Autonomous Accounts Payable

Accounts payable is an important finance function, and Vic.ai automates this entire process using AI, from receiving invoices and analyzing, interpreting, and coding cost accounts and dimensions all the way to approval and electronic payments.

Approval

Our platform routes approval to the correct person and monitors the approval process, while silently learning over time what your business approves and rejects. This learning is initially used to notify you of potential invoices to reject, and ultimately, once your rejection and approval patterns are recognized, Vic.ai will approve invoices on your behalf.

Cash Flow Management

Navigating cash flow can sometimes be tough for fast growing mid-sized enterprises. Vic.ai will learn the difference between vendors you must pay on time, and costs you can postpone while monitoring your cash balance.
